

**AQUA-LIT** is a project that aims at providing the aquaculture sector with a sustainable **toolbox** of innovative ideas and methodologies to address the 3 main components to tackle marine littering: **prevention & reduction, monitoring & quantification, and removal & recycling.**

To fulfill this mission, we will be working face-to-face with aquaculture farmers in three regional **Learning Labs**: in the **Mediterranean basin, the North Sea and the Baltic Sea regions.** In parallel, we will identify and cluster existing, upcoming and already implemented tools on marine littering, and we will further **develop a platform and an app** to provide the '**Tide against marine litter toolbox**'.

Lastly, we will '**scale up the tide**' by developing a '**policy for less litter**' set of recommendations, by showcasing the '**funding a wave of solutions**' available for the sector and by coming up with a **transferability plan for outermost regions.**

Through this, we expect to help all stakeholders from the aquaculture chain to increase the understanding, awareness and availability of solutions, so a potential **transformation of the aquaculture sector** towards a less polluting sector can become possible.
